# Seed Trade Import/Export Codes

---

The following list of import and export codes is provided for the easy reference of CSTA International Committee members. Import codes are to be used for all products being brought into Canada.

Export codes are to be used to identify products being exported, with the exception of shipments to U.S. In some cases, similar products may have the same export codes, but different import codes. This is correct as some export classifications have not been broken out by Statistics Canada.

All products being exported to the U.S. should be identified with the relevant code from the U.S. Import Code column. In some cases, U.S. classifications vary slightly from the Canadian ones. Only use extra detail in columns where it is supplied. (*e.g. sunflower seed for oil extraction and other uses. In other words, only use the code for sunflower seed for oil extraction to the U.S. [1206.00.00.35]. If shipping elsewhere, use the export code for sunflower seed [1206.00.10].*)

Chapter 2 indicates those codes for **non-seed** shipments. Please do not use them unless you are making commodity shipments.

Please have your internal people or Customs House use these codes. Accurate use of these codes is important.

More copies of this handbook are available from the Canadian Seed Trade Association office (613) 829-9527 or on-line at [www.cdnseed.org](http://www.cdnseed.org).
